

Artwork in Architectural Glass

Artwork in Architectural Glass is a cast glass manufacturer specializing in customized commission pieces. All its molds are individually hand-made for each project, it points out. Holes and notches can be provided, as well as custom shapes. The glass can be tempered, bent, and laminated with a PVB interlayer between

two sheets of cast glass. The company recently introduced three distinct textures that have been approved by UL (in wet, dry, and oily conditions) for non-slip floor-

ing and walking surfaces. The company supplies glass in a maximum size of 80 x 140 inches with standard thickness from $\frac{1}{8}$ to $\frac{3}{4}$ inch. The glass can also be colored to match a specific color, the supplier points out. Recent installation pieces have included glass stair treads, room dividers, handrails, and cast/bent/tempered shower panels.
